HOVER/CLICKING COLORS

O R D E R

M E N U

O R D E R

M E N U

When you hover or click these buttons they loose their shadow. So it gives the impression that its a button being pushed down. (If this is not possible, option 2 would be to just use the opposite color. The red turns blue and blue turns red when pressed).

When you hover over these spinning circles, they turn from red or yellow to the tan background with red outline and red type. Also a red shadow pops under it. (If this is not possible, option 2 would be to just use the opposite color. The yellow circle would turn red with white type and the red circle would turn yellow with red type+outline).
